Coburn Technologies Introduces New Huvitz 9000 Series Line of Diagnostic Products

SOUTH WINDSOR, CT – Coburn Technologies, a leader in providing innovative, end-to-end customer solutions to the world's ophthalmic lens processing industries, introduces the 9000 series, a new line of diagnostics products.

A major development in lensmeters, the HLM-9000 introduces the Blue Light Hazard Measurement function. The HLM-9000 is the only product on the market capable of measuring the harmful blue light emitted from LED screens, usually found on television screens and handheld devices.

Equipped with a 21 Point Exam Package, the HDR-9000 Digital Refractor removes difficulty by displaying results for easy reading by examiners and patients. Another advanced feature is the tilting function for near chart tests.

The HRK-9000 Auto Ref/Keratometer is equipped with features not found in any other system in the world. The unique functions include a Meibomian Gland Analysis, Tear Film Break Up Time measurement, and a Contact Lens Fitting Guide with color camera.

Another major benefit to the 9000 series includes Wireless Communication via WiFi making it easier to transfer data. The 9000 series is fully compatible with all EMR systems and equipped with a full three year warranty.

“The 9000 series offers several key features not available on any other product on the market. Blue Light is an increasingly growing concern. Meibomian Gland Analysis and Tear Film Break Up Time are useful tools for the Eye Care Professional,” Alex Incera, president of Coburn Technologies stated.

Coburn Technologies will showcase Huvitz 9000 series at this year’s Vision Expo West in Las Vegas, NV., American Academy of Optometry in New Orleans, LA., and American Academy of Ophthalmology in Las Vegas, NV. Coburn is currently taking orders and customer shipments have begun. Information is available from Coburn online at www.coburntechnologies.com, or call 1-800-COBURN-1 for pricing and additional details.

###

About Coburn Technologies

Coburn Technologies (<http://www.coburntechnologies.com>) is a long standing company continuing a 60 year tradition as a leading provider of integrated optical lens processing systems. Coburn manufactures and services a complete series of equipment, software and supplies used in surfacing prescriptions in lens blanks, coating lenses, and machining lenses to fit patient frames as

well as distribution of refractory and patient diagnostic equipment. Coburn Technologies is American owned and globally headquartered in South Windsor, Connecticut USA.
